

21CY681 - INTERNET PROTOCOL LAB - I

Name: Meera E Timothy

Register Number: CB.EN.P2CYS22002

Date: 2nd october 2022

Assignment Topic

Basic Network Administration and Troubleshooting Using Windows
Command Line Utilities

AIM

To perform troubleshooting in the network using basic Windows
command-line utilities

TOOLS REQUIRED

- Windows Server 2012 and Windows 10 VMs
- Administrator privileges to run the tools

PROCEDURE

Login to Windows 10 VM and disable the network adapter:

Go to Control Panel then to Network and Internet then to Network and Sharing Center and click Change adapter setting.

Select and right-click the Ethernet adapter and click Disable from the context Menu.

It will disable Ethernet adapter.

TASK 1

Verifying IP Configuration Settings

- Launch **Windows server 2012** VM and login to the local administrator account.
- Open a command prompt in Admin mode by right-clicking on the **Start** icon and then click on **Command Prompt (Admin)** from the context menu.
- The command prompt appears on the screen.
- Using different ipconfig parameters to perform various network troubleshooting activities.

a) ipconfig – Display IPV4 address, IPV6 address, subnet mask and default gateway for all adapters.

```

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\Users\meera> ipconfig /renew[Adapter]

Error: unrecognized or incomplete command line.

USAGE:
    ipconfig [/allcompartments] [/? | /all |
        /renew [adapter] | /release [adapter] |
        /renew6 [adapter] | /release6 [adapter] |
        /flushdns | /displaydns | /registerdns |
        /showclassid adapter |
        /setclassid adapter [classid] |
        /showclassid6 adapter |
        /setclassid6 adapter [classid] ]

where
    adapter      Connection name
                  (wildcard characters * and ? allowed, see examples)

Options:
    /?           Display this help message
    /all         Display full configuration information.
    /release     Release the IPv4 address for the specified adapter.
    /release6    Release the IPv6 address for the specified adapter.
    /renew       Renew the IPv4 address for the specified adapter.
    /renew6      Renew the IPv6 address for the specified adapter.
    /flushdns    Purges the DNS Resolver cache.
    /registerdns  Refreshes all DHCP leases and re-registers DNS names
    /displaydns  Display the contents of the DNS Resolver Cache.
    /showclassid Displays all the dhcp class IDs allowed for adapter.
    /setclassid  Modifies the dhcp class id.
    /showclassid6 Displays all the IPv6 DHCP class IDs allowed for adapter.
    /setclassid6 Modifies the IPv6 DHCP class id.

The default is to display only the IP address, subnet mask and
```

```
The default is to display only the IP address, subnet mask and
default gateway for each adapter bound to TCP/IP.

For Release and Renew, if no adapter name is specified, then the IP address
leases for all adapters bound to TCP/IP will be released or renewed.

For Setclassid and Setclassid6, if no ClassId is specified, then the ClassId is removed.

Examples:
> ipconfig          ... Show information
> ipconfig /all     ... Show detailed information
> ipconfig /renew    ... renew all adapters
> ipconfig /renew EL* ... renew any connection that has its
                        name starting with EL
> ipconfig /release *Con* ... release all matching connections,
                        eg. "Wired Ethernet Connection 1" or
                        "Wired Ethernet Connection 2"
> ipconfig /allcompartments ... Show information about all
                        compartments
> ipconfig /allcompartments /all ... Show detailed information about all
                        compartments

PS C:\Users\meera> e>
```

d) `ipconfig /release [Adapter]` - Sends a DHCP RELEASE message to the DHCP server to release the current DHCP configuration and discard the IP address configuration for either all adapters or for a specified adapter.

```

PS C:\Users\meera e> ipconfig /release[Adapter]

Error: unrecognized or incomplete command line.

USAGE:
    ipconfig [/allcompartments] [/? | /all |
                                                /renew [adapter] | /release [adapter] |
                                                /renew6 [adapter] | /release6 [adapter] |
                                                /flushdns | /displaydns | /registerdns |
                                                /showclassid adapter |
                                                /setclassid adapter [classid] |
                                                /showclassid6 adapter |
                                                /setclassid6 adapter [classid] ]

where
  adapter      Connection name
                (wildcard characters * and ? allowed, see examples)

Options:
/?           Display this help message
/all        Display full configuration information.
/release     Release the IPv4 address for the specified adapter.
/release6    Release the IPv6 address for the specified adapter.
/renew       Renew the IPv4 address for the specified adapter.
/renew6      Renew the IPv6 address for the specified adapter.
/flushdns    Purges the DNS Resolver cache.
/registerdns Refreshes all DHCP leases and re-registers DNS names
/displaydns  Display the contents of the DNS Resolver Cache.
/showclassid Displays all the dhcp class IDs allowed for adapter.
/setclassid  Modifies the dhcp class id.
/showclassid6 Displays all the IPv6 DHCP class IDs allowed for adapter.
/setclassid6 Modifies the IPv6 DHCP class id.

The default is to display only the IP address, subnet mask and
default gateway for each adapter bound to TCP/IP.

For Release and Renew, if no adapter name is specified, then the IP address
leases for all adapters bound to TCP/IP will be released or renewed.

```

```

(wildcard characters * and ? allowed, see examples)

Options:
/?           Display this help message
/all        Display full configuration information.
/release     Release the IPv4 address for the specified adapter.
/release6    Release the IPv6 address for the specified adapter.
/renew       Renew the IPv4 address for the specified adapter.
/renew6      Renew the IPv6 address for the specified adapter.
/flushdns    Purges the DNS Resolver cache.
/registerdns Refreshes all DHCP leases and re-registers DNS names
/displaydns  Display the contents of the DNS Resolver Cache.
/showclassid Displays all the dhcp class IDs allowed for adapter.
/setclassid  Modifies the dhcp class id.
/showclassid6 Displays all the IPv6 DHCP class IDs allowed for adapter.
/setclassid6 Modifies the IPv6 DHCP class id.

The default is to display only the IP address, subnet mask and
default gateway for each adapter bound to TCP/IP.

For Release and Renew, if no adapter name is specified, then the IP address
leases for all adapters bound to TCP/IP will be released or renewed.

For Setclassid and Setclassid6, if no ClassId is specified, then the ClassId is removed.

Examples:
> ipconfig           ... Show information
> ipconfig /all      ... Show detailed information
> ipconfig /renew     ... renew all adapters
> ipconfig /renew EL* ... renew any connection that has its
                        name starting with EL
> ipconfig /release *Con* ... release all matching connections,
                        eg. "Wired Ethernet Connection 1" or
                        "Wired Ethernet Connection 2"
> ipconfig /allcompartments ... Show information about all
                        compartments
> ipconfig /allcompartments /all ... Show detailed information about all
                        compartments

```

e) ipconfig /flushdns ---->Flushes and resets the contents of the DNS client resolver cache.

```

Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\Users\meera e> ipconfig /flushdns

Windows IP Configuration

Successfully flushed the DNS Resolver Cache.
PS C:\Users\meera e>

```

f) `ipconfig /displaydns` - Displays the contents of the DNS client resolver cache, which includes both entries preloaded from the local Hosts file and any recently obtained resource records for name queries resolved by the computer.

```
PS C:\Users\meera e> ipconfig /displaydns

Windows IP Configuration

1.16.29.172.in-addr.arpa
-----

PS C:\Users\meera e> |
```

g) `ipconfig /registerdns` ---->Initiates manual dynamic registration for the DNS names and IP addresses that are configured at a computer.

```
PS C:\Users\meera e> ipconfig /registerdns

Windows IP Configuration

Registration of the DNS resource records for all adapters of this computer has been initiated. Any errors will be reported in the Event Viewer in 15 minutes.
PS C:\Users\meera e>
```

h) `ipconfig /showclassid Adapter` - Displays the DHCP class ID for a specified adapter.

```
PS C:\Users\meera e> ipconfig /showclassid Adapter

Windows IP Configuration

The operation failed as no adapter is in the state permissible for
this operation.
PS C:\Users\meera e> |
```

i) `ipconfig /setclassid Adapter[ClassID]` - Configures the DHCP class ID for a specified adapter.

```
PS C:\Users\meera e> ipconfig /setclassid Adapter[ClassID]

Windows IP Configuration

The operation failed as no adapter is in the state permissible for
this operation.
PS C:\Users\meera e>
```

j) `ipconfig /?` - Displays help at the command prompt.

```
C:\WINDOWS\system32>ipconfig/?
```

USAGE:

```
ipconfig [/allcompartments] [/? | /all |  
        /renew [adapter] | /release [adapter] |  
        /renew6 [adapter] | /release6 [adapter] |  
        /flushdns | /displaydns | /registerdns |  
        /showclassid adapter |  
        /setclassid adapter [classid] |  
        /showclassid6 adapter |  
        /setclassid6 adapter [classid] ]
```

where

```
adapter      Connection name  
              (wildcard characters * and ? allowed, see examples)
```

Options:

```
/?          Display this help message  
/all        Display full configuration information.  
/release    Release the IPv4 address for the specified adapter.  
/release6   Release the IPv6 address for the specified adapter.  
/renew      Renew the IPv4 address for the specified adapter.  
/renew6     Renew the IPv6 address for the specified adapter.  
/flushdns   Purges the DNS Resolver cache.  
/registerdns Refreshes all DHCP leases and re-registers DNS names  
/displaydns Display the contents of the DNS Resolver Cache.  
/showclassid Displays all the dhcp class IDs allowed for adapter.  
/setclassid  Modifies the dhcp class id.  
/showclassid6 Displays all the IPv6 DHCP class IDs allowed for adapter.  
/setclassid6 Modifies the IPv6 DHCP class id.
```

```
/registerdns Refreshes all DHCP leases and re-registers DNS names  
/displaydns Display the contents of the DNS Resolver Cache.  
/showclassid Displays all the dhcp class IDs allowed for adapter.  
/setclassid  Modifies the dhcp class id.  
/showclassid6 Displays all the IPv6 DHCP class IDs allowed for adapter.  
/setclassid6 Modifies the IPv6 DHCP class id.
```

The default is to display only the IP address, subnet mask and default gateway for each adapter bound to TCP/IP.

For Release and Renew, if no adapter name is specified, then the IP address leases for all adapters bound to TCP/IP will be released or renewed.

For Setclassid and Setclassid6, if no ClassId is specified, then the ClassId is removed.

Examples:

```
> ipconfig          ... Show information  
> ipconfig /all     ... Show detailed information  
> ipconfig /renew    ... renew all adapters  
> ipconfig /renew EL* ... renew any connection that has its  
                        name starting with EL  
> ipconfig /release *Con* ... release all matching connections,  
                        eg. "Wired Ethernet Connection 1" or  
                        "Wired Ethernet Connection 2"  
> ipconfig /allcompartments ... Show information about all  
                        compartments  
> ipconfig /allcompartments /all ... Show detailed information about all  
                        compartments
```

TASK 2

Checking IP level Connectivity Using Ping command

Type **ping** followed by the IP address of the Windows 10 machine

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\Users\meera e> ping 10.10.10.10

Pinging 10.10.10.10 with 32 bytes of data:
Reply from 202.88.230.169: TTL expired in transit.
Reply from 202.88.230.169: TTL expired in transit.
Reply from 202.88.230.169: TTL expired in transit.
Reply from 202.88.230.169: TTL expired in transit.

Ping statistics for 10.10.10.10:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
PS C:\Users\meera e> |
```

ping -n count : Determine the number of echo request to send. The default is 4 request.

```
PS C:\Users\meera e> ping -n Count
Bad value for option -n, valid range is from 1 to 4294967295.
PS C:\Users\meera e> |
```

Ping -w Timecount :- Enables you to adjust the time-out. The default is 1000.

```
PS C:\Users\meera e> ping -w Timecount
IP address must be specified.
PS C:\Users\meera e> |
```

Ping -l size – Enables you to adjust the size of the ping packet. The default size is 32 bytes.

```
PS C:\Users\meera e> ping -l Size
IP address must be specified.
PS C:\Users\meera e> |
```

Ping -f – sets the Do Not fragment bit on the ping packet. By default, the ping ping .

Now enable ethernet which have been enabled in the adapter setting.

After that, performing ping command .

```
PS C:\Users\meera e> ping 10.10.10.10

Pinging 10.10.10.10 with 32 bytes of data:
Reply from 202.88.230.169: TTL expired in transit.
Reply from 202.88.230.169: TTL expired in transit.
Reply from 202.88.230.169: TTL expired in transit.
Reply from 202.88.230.169: TTL expired in transit.

Ping statistics for 10.10.10.10:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
PS C:\Users\meera e> |
```

Tracert 10.10.10.10 – is useful for troubleshooting large networks where several paths can lead to same point or where many intermediate components are involved.

```
PS C:\Users\meera e> tracert 10.10.10.10

Tracing route to 10.10.10.10 over a maximum of 30 hops

  1  192.168.1.8  reports: Destination host unreachable.

Trace complete.
PS C:\Users\meera e> |
```

Nslookup certifiedhacker . com – Nslookup stands for name server look up. It is used to query a DNS server to obtain its domain name and associated IP address.

```
PS C:\Users\meera e> nslookup certifiedhacker.com
Server:  UnKnown
Address:  192.168.1.1

Non-authoritative answer:
Name:     certifiedhacker.com
Address:  162.241.216.11

PS C:\Users\meera e> |
```

Nslookup -type =A certifiedhacker.com – we can also use the nslookup command with type parameters to get non-authoritative name server information as shown in the screenshot given below.

```
PS C:\Users\meera e> nslookup -type=A certifiedhacker.com
Server: UnKnown
Address: 192.168.1.1

Non-authoritative answer:
Name: certifiedhacker.com
Address: 162.241.216.11

PS C:\Users\meera e>
```

Nslookup -type =soa certifiedhacker.com – for getting authoritative ns information.

```
PS C:\Users\meera e> nslookup -type=soa certifiedhacker.com
Server: UnKnown
Address: 192.168.1.1

DNS request timed out.
    timeout was 2 seconds.
Non-authoritative answer:
certifiedhacker.com
    primary name server = ns1.bluehost.com
    responsible mail addr = dnsadmin.box5331.bluehost.com
    serial = 2018011205
    refresh = 86400 (1 day)
    retry = 7200 (2 hours)
    expire = 3600000 (41 days 16 hours)

```
PS C:\Users\meera e>
```

Netstat -interval – Redisplay the selected information every interval seconds

```
PS C:\Users\meera e> netstat Interval

Displays protocol statistics and current TCP/IP network connections.

NETSTAT [-a] [-b] [-e] [-f] [-i] [-n] [-o] [-p proto] [-r] [-s] [-t] [-x] [-y] [interval]

-a          Displays all connections and listening ports.
-b          Displays the executable involved in creating each connection or
           listening port. In some cases well-known executables host
           multiple independent components, and in these cases the
           sequence of components involved in creating the connection
           or listening port is displayed. In this case the executable
           name is in [] at the bottom, on top is the component it called,
           and so forth until TCP/IP was reached. Note that this option
           can be time-consuming and will fail unless you have sufficient
           permissions.
-e          Displays Ethernet statistics. This may be combined with the -s
           option.
-f          Displays Fully Qualified Domain Names (FQDN) for foreign
           addresses.
-i          Displays the time spent by a TCP connection in its current state.
-n          Displays addresses and port numbers in numerical form.
-o          Displays the owning process ID associated with each connection.
-p proto    Shows connections for the protocol specified by proto; proto
           may be any of: TCP, UDP, TCPv6, or UDPv6. If used with the -s
           option to display per-protocol statistics, proto may be any of:
           IP, IPv6, ICMP, ICMPv6, TCP, TCPv6, UDP, or UDPv6.
-q          Displays all connections, listening ports, and bound
           nonlistening TCP ports. Bound nonlistening ports may or may not
           permissions.
-e          Displays Ethernet statistics. This may be combined with the -s
           option.
-f          Displays Fully Qualified Domain Names (FQDN) for foreign
           addresses.
-i          Displays the time spent by a TCP connection in its current state.
-n          Displays addresses and port numbers in numerical form.
-o          Displays the owning process ID associated with each connection.
-p proto    Shows connections for the protocol specified by proto; proto
           may be any of: TCP, UDP, TCPv6, or UDPv6. If used with the -s
           option to display per-protocol statistics, proto may be any of:
           IP, IPv6, ICMP, ICMPv6, TCP, TCPv6, UDP, or UDPv6.
-q          Displays all connections, listening ports, and bound
           nonlistening TCP ports. Bound nonlistening ports may or may not
           be associated with an active connection.
-r          Displays the routing table.
-s          Displays per-protocol statistics. By default, statistics are
           shown for IP, IPv6, ICMP, ICMPv6, TCP, TCPv6, UDP, and UDPv6;
           the -p option may be used to specify a subset of the default.
-t          Displays the current connection offload state.
-x          Displays NetworkDirect connections, listeners, and shared
           endpoints.
-y          Displays the TCP connection template for all connections.
           Cannot be combined with the other options.
interval    Redisplays selected statistics, pausing interval seconds
           between each display. Press CTRL+C to stop redisplaying
           statistics. If omitted, netstat will print the current
           configuration information once.

$ C:\Users\meera e>
```

netstat /? – Displays help the command prompt

```

PS C:\Users\meera e> netstat /?

Displays protocol statistics and current TCP/IP network connections.

NETSTAT [-a] [-b] [-e] [-f] [-i] [-n] [-o] [-p proto] [-r] [-s] [-t] [-x] [-y] [interval]

-a          Displays all connections and listening ports.
-b          Displays the executable involved in creating each connection or
           listening port. In some cases well-known executables host
           multiple independent components, and in these cases the
           sequence of components involved in creating the connection
           or listening port is displayed. In this case the executable
           name is in [] at the bottom, on top is the component it called,
           and so forth until TCP/IP was reached. Note that this option
           can be time-consuming and will fail unless you have sufficient
           permissions.
-e          Displays Ethernet statistics. This may be combined with the -s
           option.
-f          Displays Fully Qualified Domain Names (FQDN) for foreign
           addresses.
-i          Displays the time spent by a TCP connection in its current state.
-n          Displays addresses and port numbers in numerical form.
-o          Displays the owning process ID associated with each connection.
-p proto    Shows connections for the protocol specified by proto; proto
           may be any of: TCP, UDP, TCPv6, or UDPv6. If used with the -s
           option to display per-protocol statistics, proto may be any of:
           IP, IPv6, ICMP, ICMPv6, TCP, TCPv6, UDP, or UDPv6.
-q          Displays all connections, listening ports, and bound
           nonlistening TCP ports. Bound nonlistening ports may or may not

```

RESULT:

Studied and performed basic network administration and troubleshooting using Windows command line utilities.
